

UNDERGRADUATE CURRICULUM (NON-AUTONOMOUS AFFILIATED INSTITUTIONS)

Programme: B.Tech., Artificial Intelligence and Data Science

Regulations: 2025

Abbreviations:

HUM – Humanities (Languages, Management, Heritage, and others)

BS – Basic Science (Mathematics, Physics, Chemistry)

ES – Engineering Science (General (**G**), Programme Core (**PC**), Programme Elective (**PE**) & Emerging Technology (**ET**))

SD – Skill Development

SL – Self Learning

CDP – Capstone Design Project

OE – Open Elective

L – Laboratory Course

T – Theory

LIT – Laboratory Integrated Theory

PW – Project Work

IPW – Internship cum Project Work

DIC – Department Introductory Course

TCP – Total Contact Period(s)

Program Outcomes

1. **Engineering Knowledge:** Apply math, science, and engineering fundamentals to complex problems.
2. **Problem Analysis:** Identify and analyze complex problems using research and sustainability principles.
3. **Design Solutions:** Design systems and processes considering health, safety, cost, culture, and environment.
4. **Investigations:** Use experiments, modelling, and data analysis to reach valid conclusions.
5. **Engineering Tools:** Apply modern tools for modelling and problem-solving, recognizing their limits.
6. **Society & Environment:** Assess societal, legal, and environmental impacts of engineering solutions.
7. **Ethics:** Commit to ethics, human values, diversity, and legal compliance.
8. **Teamwork:** Work effectively as an individual and in multidisciplinary teams.
9. **Communication:** Communicate clearly in reports, presentations, and documentation across diverse groups.
10. **Management & Finance:** Apply management and economic principles in projects and teamwork.

11. **Lifelong Learning:** Engage in continuous learning, adapt to new technologies, and think critically.

Program Specific Outcomes:

1. Design, develop, and deploy intelligent systems for real-world applications.
2. Utilize modern tools for innovative solutions in the field of AI and Data Science.
3. Demonstrate research aptitude, implement ethical practices and collaborate in multidisciplinary teams.

Semester I

MA25C01	Applied Calculus	L	T	P	C
		3	1	0	4
<p>Course Objectives:</p> <ul style="list-style-type: none"> • To provide technical competence of modelling engineering problems using calculus. • To apply the calculus concepts in solving engineering problems using analytical methods and computational tools. 					
<p>Differential Calculus: Functions, graph of functions, New functions from old functions, Limit of a function, Continuity, Limits at infinity, Derivative as a function, Maxima and Minima of functions of single variable, Mean value theorem, Effect of derivatives on the shape of a graph.</p> <p>Activities: Visualization of the functions, Maxima and Minima of a function using open-source software, Solving of Competitive Examination questions (Ex. GATE).</p>					
<p>Functions of Several Variables: Partial derivatives, Chain rule, Total derivative, Maxima and minima of functions of two variables, Method of Lagrange's Multipliers, Application problems in engineering.</p> <p>Activities: Partial Derivatives with two or three variables, Maxima and Minima of a function using open-source software, Solving of Competitive Examination questions (Ex. GATE).</p>					
<p>Integral Calculus: Fundamental theorem of Calculus, Indefinite integrals and the Net Change Theorem, Improper integrals, Arc Length, Area of Region, Area of surface of revolution.</p> <p>Activities: Definite and Indefinite Integrals, Determination of Area, Solving of Competitive Examination questions (Ex. GATE).</p>					
<p>Multiple Integrals: Iterated integrals and Fubini's theorem, Evaluation of double integrals, change of order of integration, change of variables between Cartesian and polar co-ordinates, evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates.</p> <p>Activities: Double integrals and triple integrals using open-source software, Solving of Competitive Examination questions (Ex. GATE).</p>					
<p>Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%.</p>					
<p>Assessment Methodology: Assignments (20%), Solution to application-oriented problems using software (20%), Solving of GATE questions (20%), Internal Examinations (40%).</p>

EN25C01	English Essentials – I	L	T	P	C
		2	0	0	2
Course Objectives: <ul style="list-style-type: none"> Enhance learners’ listening and speaking skills to understand and deliver speeches effectively Equip students with the skills to write clear, coherent, and grammatically correct texts for various purposes. Strengthen the ability to comprehend, interpret, and analyse written English across diverse contexts. 					
Speaking Skills: Self-Introduction (Tenses, Adjectives) Expressing opinions (Subject-Verb Agreement), Participating in Conversations (Speech Acts - agreeing & disagreeing – synonyms and antonyms) Suggested Activities: Self-Introduction, Just a Minute (JAM) Video recording, Situational role plays, Spell Bee, Word Substitution, Usage of Apps.					
Listening Skills: Listening to Simple Conversations (Understanding tone and intent), Short Speeches / Stories, Extracting information, Pronunciation, Listening to Various Accents. Suggested Activities: Listening and Repeating, Gap fill exercises, Note-taking					
Reading Skills: Reading Strategies – (Skimming, scanning, predicting) intensive reading - short passages and long passages on suggested themes (Sentence Patterns, Prefixes and suffixes, idioms and phrases). Activities: Reading - newspaper and digital articles, Cloze, Reading comprehension, note making and summarising,					
Writing Skills: Word Substitution, Sentence Formation, Hints Development (Guided Writing), Writing Different Types of Paragraphs - (Sentence Structure) – Letter Writing / Emails (Informal) Activities: Error Detection, Picture and poster description, Descriptive, Narrative and Comparative paragraphs, Brainstorming and Mind Mapping - Informal letters/ Emails					
Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%					
Assessment Methodology: Quiz (10%), Assignments (20%), Speaking Task (10%), Reading Task (10%), Writing Task (10%), Internal Examinations (40%).

PH25C01	Applied Physics – I	L	T	P	C
		2	0	2	3
<p>Course Objective(s):</p> <ul style="list-style-type: none"> To impart knowledge and expose the essentials of physics in various engineering applications. 					
<p>Properties of Matter: Elasticity, Cantilever, Young's modulus (non-uniform bending), Girders: Bridges and buildings, Viscosity: Stokes method, Surface tension: drop weight method, Thermal expansion, Thermal stress, Bimetallic strips, Expansion joints</p> <p>Practical: Non-Uniform bending, Young's modulus of the material, Torsional pendulum, Rigidity modulus of the wire and moment of inertia of the disc.</p> <p>Activities: Virtual demonstration of thermal stress.</p>					
<p>Oscillations: Simple Harmonic motion, Torsional pendulum, Couple per unit twist, Damped and Forced Oscillation</p> <p>Waves: Waves on a stretched string, Energy and Power, standing waves, Ultrasonics, piezo, electric method, Acoustic grating, Electromagnetic waves: Maxwell equation, Production of EM waves by dipole antenna, Propagation of EM waves in free space, wave equation, Cell phone reception</p> <p>Practical: Melde's string experiment – Frequency of an electrically vibrating metal tip.</p> <p>Activities: Virtual demonstration of propagation of EM waves</p>					
<p>Quantum Mechanics: Black body radiation, Photoelectric effect, de Broglie hypothesis, Schrodinger Wave equation, Particle in a box (infinite potential well - three-dimensional box), Barrier penetration and quantum tunnelling.</p> <p>Practical: Photo-electric effect, Determination of Planck's constant.</p> <p>Activities: Virtual demonstration of Scanning Transmission Electron Microscope</p>					
<p>Applied Optics: Interference: Air wedge, Michelson's Interferometer, Fiber optics: Structure of a fiber, Fiber Optic Communication System, Fiber Sensors (Virtual demo), Displacement, pressure sensor and Temperature sensor, Einstein Co-efficient, Nd:YAG laser, CO₂ laser (construction, functioning and applications), dye laser</p> <p>Practical: Ruling width of Compact disc using Laser, Thickness of a thin sheet/wire using Air wedge Method.</p> <p>Activities: Demonstration of sensors and applications of Lasers</p>					
<p>Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%</p>

Course Objectives: <ul style="list-style-type: none"> To provide a comprehensive understanding of physics concepts in computer science and engineering applications. 					
Magnetic Materials: Parameters, Ferromagnetic materials, Ferrites - Soft and Hard magnetic materials – GMR sensors - magnetic disk memories – Principle of magnetic recording – Magnetic data storage. Activities: Determination of Hysteresis loop for ferromagnetic materials.					
Logic Gates: Conversion of Binary to decimal - decimal to binary – binary coded decimal code-logic gates (OR, AND, NOT, NAND and NOR)–Exclusive OR gate- simplification based on basic Boolean theorems (sum of products, product of sums expression)- simplification by Karnaugh Map method (don't care conditions). Activities: Virtual demonstration of Logic Gates.					
Nano-Devices: Introduction – electron density in bulk material – size dependence of Fermi energy-quantum confinement – quantum structures: quantum wells, wires and dots – band gap of nanomaterials. Tunneling- Coulomb blockade - single electron transistor - resonant-tunneling diode- Carbon nanotubes: Properties and applications. Activities: Virtual demonstration of single electron transistor					
Quantum Computing: Quantum system for information processing - quantum states – classical bits – quantum bits or qubits – Bloch sphere -CNOT gate – Single and multiple qubits – quantum gates (Pauli – X, Y and Z Gates, Hadamard Gate, Phase gate - T gate CNOT Gate)– advantage of quantum computing over classical computing. Activities: Virtual demonstration of quantum computing					
Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%					
Assessment Methodology: Quiz (10%), Assignments (30%), Flipped Class (10%), Internal Examinations (50%)

AD25201	Python for Data Science	L	T	P	C
		3	0	2	4

Course Objectives:

- To impart knowledge on Python programming and how it can be used for solving problems.
- To illustrate how to handle, clean, and analyze data using Python libraries
- To make use of Python tools and open datasets for real-world data science applications.

Basics of Python: What is Python, Python Interpreter, Python language basics: Language Semantics, Data Types, Variables, Basic Functions, Operators, Flow Control Statements, Data Structures and Sequences: List, Tuple, Set, Dictionaries.

Practical:

1. Programs using conditional and looping constructs
2. Programs using different data frames like list, tuple, set and dictionary.

Functions and Files: Defining a Function, Passing Arguments, Return Values, Passing a List, Creating and Using a Class, Strings: Working with Strings, String Methods, Files: Reading from a File, Writing to a File, Exceptions, Python Libraries: Importing libraries.

Practical:

1. Programs using functions and classes.
2. Programs using strings and files

Foundations of Data Science: Introduction to Data Science- Applications of Data Science - Data Science Process: Overview, Defining Research Goals, Retrieving Data - Data Preparation: Data Wrangling- Handling Missing Data- Data Transformation, Outlier/Noise and Anomalies, Exploratory Data Analysis, Build the Model, Present Findings, Data Mining, Data Warehousing.

Practical:

1. Data Creation and Mathematical operations.
2. Graphs and Plotting.

Descriptive Analytics: Facets of Data, Types of Variables, Statistical Description of Data, Describing Data with Tables and Graphs, Describing Data with Averages, Describing Variability, Normal Distributions and Standard (z) Scores, Correlation, Scatter plots, correlation coefficient for quantitative data –computational formula for correlation coefficient, Regression, Regression line, least squares regression line.

Practical:

1. Statistical description of data without libraries
2. Generation of correlation coefficient.

3. Linear regression model.

Numpy and Pandas Libraries: Creating Arrays, attributes, Numpy Arrays objects, Basic operations (Array Join- split- search- sort), Indexing, Slicing and Iterating, Copying Arrays, Arrays shape Manipulation, Identity Array, eye function. Exploring Data using Series- Exploring Data using Data Frames, Index objects- reindex, Drop Entry, Selecting Entries- Data Alignment, Rank and Sort, Summary Statistics, Index Hierarchy.

Practical:

1. Creation of 1D, 2D, and 3D NumPy arrays
2. Array Slicing and Indexing operations
3. Reindexing, and aligning data across multiple Data Frames.

Data Visualization: Introduction to Matplotlib, Plots, making subplots, Controlling axes, Ticks, Labels and legends, Annotations and drawing on subplots, Saving plots to files, Seaborn library, Making sense of data through advanced visualization, Controlling the properties of Chart, Scatter plot, Line plot, Bar plot, Histogram, Box plot, Pair plot, Styling your plot, 3D plot of surface.

Practical:

1. Line plot, bar plot, histogram, and box plot.
2. Seaborn plots, plot styling and customization

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Assignments (10%), Quiz (5%), Project based learning (20%), Flipped Classroom (5%), Review of GATE questions (10%) & Internal Assessment: 50%

Semester III

MA25C08	Discrete Mathematics	L	T	P	C
		3	1	0	4

Course Objective:

The Objectives of the course are to Introduce foundational concepts of set theory, relations, functions, and recurrence relations relevant to modeling data and algorithmic structures and to explain principles of propositional and predicate logic, Boolean algebra, and lattice theory for reasoning and decision-making in AI systems and to present core ideas of graph theory and its applications to analyze and optimize networks, data structures, and intelligent systems.

Set Theory, Relations and Functions: Set theory – inductive definition of sets and proof by induction– Peano postulates – Relations – equivalence relations and partitions. Functions –Type of functions: Injective, surjective and bijective functions –Composition of functions – Inverse functions – Permutation functions – Recurrence relations – Solving linear recurrence relations.

Activities: Create and present Venn diagrams to illustrate union, intersection. Categorize real-world mappings such as student-to-email ID, username-to-password, as injective, surjective, or bijective using role-play or sorting tasks.

Logic : Propositions – Logical operators – Normal forms – Rules of inference – Consistency and inconsistency-Propositional logic – Proofs – Predicates – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Rules of specification and generalization – Validity of arguments.

Activities: Conduct a truth table building competition for compound propositions using logical operators.

Boolean Algebra and Lattice Theory: Partial ordering – Posets – Lattices as Posets – Properties of lattices - Lattices as algebraic systems – Sub lattices – Direct product and homomorphism – Some special lattices – Boolean algebra – Sub Boolean Algebra – Boolean Homomorphism.

Activities: Draw Hasse diagrams for lattices from a given set and identify sublattices and lattice operations.

Graph Theory: Graphs – Types of graphs – Matrix representation of graphs- Graph isomorphism- Walk – Path – Cycles – Eulerian graphs – Hamiltonian graphs – Planar graphs – Euler formula – Shortest path algorithm: Dijkstra’s algorithm.

Activities: Implement Dijkstra’s algorithm to find the shortest path in a weighted AI decision graph.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Assignments (20%), Solution to application-oriented problems using software (20%), Solving Competitive Examination questions (20%), Internal Examinations (40%).

Course Objectives: This course presents various data structures and their importance to provide a comprehensive view about problem solving skills.

Linear Data Structures: Abstract Data Types- Internal Representation of Primitive Data Structures- One Dimensional and Multi-Dimensional Arrays- linear lists- Singly, doubly, Circular linked lists- Applications.

Practicals

- Single and Multidimensional arrays
- Singly, Doubly and Circular Linked Lists

Stacks and Queues: Stack: Representations – Operations – Implementations – Applications. Queue: Representations – Operations – Implementations – Types - Applications.

Practicals

- String reverse operations and Expression evaluation
- Circular Queue and Priority Queue

Trees: Representations – Types – Binary Search Trees (BSTs) - AVL Tree – Operations: Search, Traversals, Rotations - Balanced BSTs- Splay trees- B-trees- Binary Heaps.

Practicals

- Traversal operation
- AVL Tree rotations
- Query and Update operations on Balanced BSTs

Sorting, Searching & Hashing Techniques: Linear and Binary Search - Bubble Sort - Insertion Sort- Merge Sort- Bucket Sort- Quick Sort- Heap sort- Hashing techniques- Dictionaries- Hash function- Collision - Separate chaining- open addressing.

Practicals

- Quick and Heap Sort
- Binary Search and Hashing

Graphs: Representation - Types – Operations - Prim's, Kruskal algorithms - Dijkstra's algorithm – Connected and Biconnected Components.

Practicals

- BFS and DFS algorithms
- Minimum Spanning Tree and shortest path algorithms

AD25C01	Exploratory Data Analysis	L	T	P	C
		3	0	2	4

Course Objectives:

This course aims to provide in-depth knowledge and practical skills in performing Exploratory Data Analysis (EDA), using statistical and graphical techniques.

Introduction: Purpose and goals of EDA - Mindset for effective data exploration - Significance of EDA in the data science lifecycle - Types of data and quality issues - EDA vs. Classical and Bayesian approaches - Tools and libraries for EDA - Visual techniques for initial insights.

Practicals:

1. Load a real-world dataset (CSV/JSON) into a Pandas DataFrame and inspect its structure using `.head()`, `.info()`, `.shape`, and `.describe()`.
2. Choose one dataset and create a “data story” using 3 to 5 visualizations that highlight trends, patterns, or anomalies.

Data Wrangling: Importing, loading, and cleaning datasets - Merging, reshaping, and pivoting data - Handling missing values and outliers - Renaming, deduplication, discretization, and binning - Permutation and random sampling - Challenges in real-world data preprocessing.

Practicals:

1. Load a messy dataset with missing values, duplicates, and incorrect data types. Identify and handle missing values using Pandas functions, applying mean or median for numeric data and mode for categorical data. Remove duplicates and verify data consistency.
2. Rename ambiguous column names to meaningful ones and convert improperly inferred data types to suitable formats (e.g., object to float). Apply binning (equal-width/equal-frequency) on a continuous column such as age or income. Display the new binned column and analyze its utility.

Multivariate Analysis, Relationship Exploration and Causal Inference: Univariate, Bivariate, and Multivariate Analysis - Interpreting relationships and Simpson’s Paradox - Multicollinearity and correlation pitfalls - Visualizing multivariate data using pair plots and heatmaps - Causal inference in data science: correlation vs. causation, confounding variables

Practicals:

1. Create and analyze a detailed correlation matrix. Identify and explain variable pairs with high correlation coefficients ($r > 0.8$ or $r < -0.8$).
2. Construct a `sns.pairplot()` for 4–6 numerical columns with an additional categorical hue to observe grouped patterns across variables.

Time-Oriented Data Exploration: Time-series data - Time-based indexing and date time conversion in pandas - Seasonal patterns, resampling (up/down), and aggregations - Line plots, rolling statistics, and anomaly spotting.

Practicals:

1. Perform both down-sampling (e.g., daily to monthly) and up-sampling (conceptual/fill methods) using `resample()` and aggregate meaningful summaries.
2. Compute rolling mean and standard deviation for a chosen variable (e.g., 7-day moving average). Use plots to identify anomalies or trend shifts.

Statistical Testing for Insights: Hypothesis Testing: Null vs. Alternative, Type I & II Errors - Statistical tests: t-tests, p-values using `scipy` and `statsmodels` - Interpreting test results in the context of EDA.

Practicals:

1. Perform t-tests or other appropriate statistical tests using `scipy.stats`. Record t-values, p-values, and significance level conclusions.
2. Interpret test results in layman terms: Report whether the difference is statistically significant, and what it implies for decision-making.

From EDA to Model Deployment: Supervised vs. unsupervised models - Simple and Multiple Linear Regression - Train/Test Split, Cross-validation - Evaluation metrics: MAE, RMSE, R^2 , Accuracy, F1-score - Saving models using `pickle` or `joblib` - Basic deployment using `Flask` for local predictions.

Practicals:

1. Load a dataset and select suitable independent and dependent variables for simple linear regression. Split the dataset into training and testing sets. Train a linear regression model using `sklearn`, evaluate it with MAE, RMSE, and R^2 . Interpret the model's performance.
2. Save the trained model using `pickle` or `joblib`. Build a minimal `Flask` application with a `/predict` route that takes input and returns a prediction. Test locally.

SEMESTER IV

MA25C07	Probability and Statistics	L	T	P	C
		3	1	0	4

Course Objectives: The Objectives of the course are to introduce data collection methods, classification techniques, and graphical representation of data using charts and plots, to explain the fundamental concepts of descriptive statistics, probability theory, random variables, and hypothesis testing for analyzing data and to demonstrate the application of statistical techniques such as experimental design and process control using R/Python for data-driven decision-making.

Descriptive Statistics: Collection of Data-Classification-Tabulation-Graphical Representation – Simple Bar Chart – Pie Chart -Measures of Central Tendency: Arithmetic Mean, Median and Mode – Measures of Variation: Range, Quartile Deviation - Standard Deviation and Coefficient of Variation – Five Number Summary – Box Plot Technique.

Activities: Application of descriptive statistics and data presentation methods using R/ Python programming and Analysing data using Box Plots using R/ Python programming.

Probability and Random Variables: Axioms of probability - Conditional probability – Total probability – Bayes’ theorem Random variable – Distribution function – properties – Probability mass function – Probability density function – Moments - Standard Distributions - Binomial, Poisson and Normal Distributions-Problems, Uniform Distribution and Exponential Distribution (Simple Problems)

Activities: Application of various distributions using R/ Python programming.

Two-Dimensional Random Variables : Joint distributions – Marginal and conditional distributions – Expected values of functions of two variables– Correlation and regression (for discrete data only) - Central limit theorem – Statement and Simple Problems

Activities: Applications of Correlation and Regression using R/ Python programming.

Testing of Hypothesis: Large sample tests for single mean and difference of means – Small samples tests based on t and F distributions (single mean, difference of means, paired t- test and variance ratio test) – Chi-square test for independence of attributes and goodness of fit.

Activities: Application of Student – t test, F test ,Chi –s square test using R/ Python programming.

Design of Experiments: Analysis of Variance (ANOVA) – Completely Randomized Design (CRD) – Randomized Block Design (RBD) – Latin Square Design (LSD)

Activities: Application and visualization of One-way ANOVA and Two -way ANOVA using R/ Python programming.

Course Objectives:					
To develop knowledge of data privacy and security principles, apply protection mechanisms and cryptographic techniques, and design secure systems that ensure data confidentiality, integrity, and compliance with regulations.					
Data Privacy & Risk Models: CIA triad – Confidentiality, Integrity, Availability. Data privacy vs. Data security – Cyber threats – Malware, Phishing, Denial-of-Service (DoS), Man-In-The-Middle (MITM). Vulnerabilities, Threat modeling, and Privacy Risk Categories.					
Activities					
Assignment: Map threats to CIA violations using current events.					
Quiz: Cyber threats					
Cryptographic Techniques for Data Security: Symmetric encryption: AES, DES, Public-key cryptography: RSA, ECC, Hashing: SHA, HMAC, Key exchange: Diffie-Hellman, Digital signatures. Block cipher modes of operation, key management protocols, elliptic curve cryptography with algebraic foundations. Number theory, Fermat's/Euler's theorems, Chinese Remainder Theorem algebraic structures, primality testing, and factorization.					
Activities					
Project Based Experiential Learning:					
<ul style="list-style-type: none"> • Implementation of RSA and SHA for secure message exchange. • Secure multicast key distribution using Chinese Remainder Theorem 					
Secure Data Storage: Secure file systems, Disk encryption, Database encryption Secure API access, Cloud data security, Token-based authentication : OAuth, JWT, Application Layer Security, Transport Layer Security, IP Security.					
Activities					
Review of GATE Questions: SSL/TLS concepts, IPSec					
Assignment: Cloud data security					
Privacy-Preserving Computation : Homomorphic encryption, Secure Multi-party Computation (SMPC), Federated Learning, Local differential privacy.					
Activities:					
Project Based Experiential Learning: Federated learning using the Flower framework.					
Flipped Class Room: Cryptographic foundations					

Legal and Regulatory Frameworks : Data protection laws: GDPR, NIS2; Indian regulations: IT Act, CERT-In, DPDP Act 2023, Aadhaar guidelines; Compliance standards: ENISA, eIDAS, ISO 27001.

Activities

Assignment: Real-world GDPR violation case and its legal impact.

Quiz: Indian Regulations

Emerging Topics in Privacy : Ethics of data privacy; Privacy Impact Assessment (PIA); Privacy in online social media; Case studies in privacy violations and impact; Secure data sharing in federated systems; Advances in privacy technologies.

CS25C13	Database Management Systems	L	T	P	C
		3	0	4	5

Course objectives: This course provides a comprehensive **foundation in** database system concepts, including architecture, data modeling, and query languages. The course discusses the concepts of transaction management, concurrency control and query optimization.

DBMS and Data Modeling: Purpose- architecture and types of DBMS-Data models: traditional, hierarchical, network, relational, object-oriented-DBMS architecture-Database users and languages (DDL, DML, DCL) – basic SQL queries

Practicals

- Installation and configuration of open-source DBMS
- Creation of databases and SQL operations

Data Modeling and Relational Design: Entity Types, Entity Sets-Attributes-Keys: Candidate, Primary, Foreign-Relationship Types & Roles - Constraints: Participation, Degree-Weak Entities & Keys - Converting ER Diagrams to Relations-Handling M:N relationships, ISA hierarchies-EER Extensions: Specialization/Generalization

Practicals

- Creation of ER Model for a real world scenario using Draw.io and Lucidchart
- Conversion of ER Diagram to Relational Schema

SQL Commands : Primary key, foreign key, unique, not null, check, IN operator, Functions - aggregate functions, Built-in functions –numeric, date, string functions, set operations, sub-queries, correlated sub-Queries: Use of group by, having, order by,join and its types, Exist, Any, All, view and its types. Transaction control commands

Practicals

- Creation of sample database and perform CRUD operations
- Combining data from multiple tables and perform complex data retrieval.

Database Design and Normalization : Functional dependencies-Normal forms: 1NF,2NF,3NF,4NF, BCNF-Decomposition, lossless joins-Impact of normalization on schema.

Practicals

- Identification of functional dependency, entities and attributes
- Implementation of the schema in SQL tool and populate with sample data.

Transactions, Concurrency and Recovery : ACID Properties-Transaction States (active, committed, aborted)-System and User Transactions - Serializability-Locking Protocols (2PL), Timestamp Ordering, Deadlocks-Isolation Levels - Log-Based Recovery: Write-Ahead Logging-Checkpoints-ARIES-Shadow Paging.

Practicals

- ACID properties (e.g., missing commit, unhandled rollback).
- Simulation of transaction in SQL

Query Processing and Indexing : Parsing, Validation, Query Trees-Query Execution Plans - Cost Estimation-Physical Plan Strategies-Heuristics and Cost-Based Optimization - Disk Storage, RAID-File Organization- B+-Tree Indexes-Hash-Based Indexing: Static & Dynamic-NoSQL

Practicals

- Query Optimization Simulation Using Query Trees
- Analyze and compare execution plans in MySQL/PostgreSQL

Course Objectives: The objectives of the course are to build students' advanced communication skills for workplace readiness and develop intercultural competence for effective collaboration in global and virtual teams. Prepare students for competitive exams with focused skill-building and test-oriented practice.

List of Activities

Stage Ready – Impactful Public Speaking .

- (i) Simulate a formal event such as an academic conference, convocation, or awards ceremony, where students roles including Master of Ceremonies (MC), Role as a dignitary, and a Commentator
- (ii) Visual Prompt Storytelling: Use random images to create spontaneous stories, focusing on plot, setting, and character,
- (iii) **Digital Presentation - Record** a short video explaining a project or technical concept, using slides, voiceover, and visual aids (to be uploaded using google classroom or drive link)

Professional and Application-Oriented Writing

- (i) Résumé Preparation: Design ATS-friendly résumés tailored to various job descriptions, using action verbs and quantifiable impact. ·
- (ii) Design engaging content for poster presentation relevant to their domain.

Receptive Skills in Workplace Communication·

- (i) Reading articles related to their domain and discuss in groups
- (ii) Visit company websites, make inferences and present in the class
- (iii) Listen to recorded mock interviews and take detailed notes. Summaries key points and action items in a professional format and make a presentation.

Intercultural Communication

- (i) Assertive vs Aggressive communication
- (ii) Role play activities – workplace communication in intercultural/crosscultural contexts

From Campus to Career: Industry Skills and Global Exam Preparation

- (i) Participate in HR interviews using AI tools or peer interviewers, responding to behavioural questions using methods like STAR (Situation, Task, Action, Result)

(ii) Practice Verbal Ability in competitive exams like UPSC, SSC, CDS, TNPSC, etc.

Weightage: Continuous Assessment: 60%, End Semester Lab Examinations: 40%.

Internal Assessment Methodology: 1. Oral story telling using visual prompts (30 marks)
2. Poster presentation (40 marks)
3. ATS resume writing (30 marks)

End Semester Assessment:

1. Interview (50 marks)
2. Verbal Ability test (50 marks)
(students must bring the resume but evaluation must be done based on the performance in the interview)
